

AIM is non-toxic and non-hazardous with no odor. Here is a non-exclusive list of AIM lubricant applications:

- Exhaust manifold bolts, oxygen sensor removal.
- Catalytic converter bolts (heat red hot and spray on) or spray and go to lunch and then remove.
- **Significantly better than Tap Magic for threading, tapping and drilling on steel, brass, bronze and aluminum.** AIM really reduces galling and provides a much smoother finished thread.
- Door hinge pins, door catch assemblies, hood latch mechanisms, trunk hinges, inside heater blend doors and vent cables and lug nut studs.
- **Apply to cylinder head bolt threads for accurate, smooth, and precise torque specs.**
- Works great on ignition cylinders and door lock cylinders,
- Battery terminal bolts that are corroded and potentially break.
- Spray on jacks that have been in trunks and have been exposed to moisture.
- Power window channels where windows operate slowly (apply very sparingly)
- Inside door panels where automatic power door locks are sticky or slow to operate.
- Squeaky strut bushings, sway bar bushings that creak or squeak.
- Rusty and corroded tie rod/ball joint nuts.
- Apply small amount on light bulb housing to prevent moisture and rust from accumulating.
- Spray on spare tire hangers under trucks where dirt and water damage are very likely.
- Trailer hitch receivers.
- Older cars where speedometer cables are used to prevent speedometer jumping and cable sound in dash cluster.
- Shifting mechanisms on manual transmission vehicles.
- Spray on u-joints for rear drive vehicles to prevent moisture and rust from building up.
- Battery hold down bolts where corrosion is always present and bolts break often.
- Glove box latches that become sticky or hard to close or open.
- Emergency brake release cables on foot activated pedals that stick.
- Emergency brake mechanisms on hand applied systems where things are usually spilled or dust accumulates frequently and makes releases stick or hard to operate.
- Power seat slides or manual seat slides that become hard to operate as vehicles age.
- Gas door release cables and hinges.
- Pickup truck tailgate hinges and release handle assemblies.
- Great for cleaning/degreasing parts. Liquefies grease making it easy to wipe off.
- Air tool oil. Haven't found a mechanic yet that doesn't love AIM for their air tools.
- Best bearing and chain lube.
- Clean, lubricate and protect your tools.
- Floor jack wheels and hinges, bay door roller wheels.
- Plus as an added bonus, as a mechanic, apply to your tool box slides and roller bearings and you won't believe how "like new" your tool box feels once again.
